

Feature Models

A feature model represents the information of all possible products of a software product line in terms of features and relationships between them.

Task: define a feature modelling language

- ✗ Identify the main notions of the domain
 - ✗ Concepts and their properties
 - ✗ Do we need additional datatypes?
 - ✗ Relationships
- ✗ Create a suitable class diagram
 - classes, associations
 - attributes, inheritance
 - cardinalities
- ✗ Define the example graphical feature model as an object diagram
